

CS 6630 StartupsVis Peer Feedback

We discussed our project proposal with Benwei Shi and Yiliang Shi

The suggestion from them:

1. About the visualization scale to the used data. They said in our map chart, if we want to show the whole list of companies, that will be too dense in some area because that area is more developed.

Response: That is a problem, we have changed our design and aggregate our data. In the data, we aggregate the companies which doing the same market and then we selected the top markets to show the data.

2. About the color sensibly. They suggest we add the legends for our charts and the color use should be meaningful.

Response: We definitely sure we will add legend for our chart. And the color use in the code will be meaningful when we apply the color scale for the chart.

3. For the year chart, they think that is not easy to understand.

Response: We will add some tooltip to the items and make a description to explain how it works.

The suggestion from Carolina:

1. She mentioned that when we use the non-conventional visualization such as the year chart which need a clear explanation to user of how to interpret it.

Response: Yes, our peers also mentioned that problem, that indeed an important aspect for our project, we will add tooltips that will clarify the meaning of each component to hover.

2. She felt our project are missing the story telling component.

Response: We will add story telling component to extract the interesting thing and show them to the users.
